

Public Involvement Plan

New Mexico Environment Department
Air Quality Bureau, Planning Section

Project: Annual Report for San Juan Generating Station for the 2010 SO₂
National Ambient Air Quality Standard Data Requirements Rule

Planning Timeframe: March – June 2020-2022

Project Planner: Anne Keller

Approval: _____
Elizabeth Bisbey-Kuehn, Chief, Air Quality Bureau

Date: _____

Purpose

The New Mexico Environment Department (NMED) developed this Public Involvement Plan (Plan) to provide public participation opportunities and information that may be needed to participate in the inspection of the required annual report for the San Juan Generating Station, pursuant to the 2010 SO₂ Data Requirements Rule. The Air Quality Bureau (Bureau) encourages public participation in regulatory and other planning opportunities and has developed this Plan to increase transparency regarding the planning and decision-making processes. This Plan integrates information about potentially affected communities and identifies resources provided by the Bureau to successfully incorporate community participation activities into the decision-making process. The Plan identifies the NMED staff and resources needed to accomplish these activities.

In developing this Plan, community participation needs were assessed to ensure appropriate promotion of public outreach by identifying whether there is a combination of environmental and demographic factors (i.e., low income community, minority community, limited English proficiency individuals, linguistically isolated households, etc.) that may impact public participation needs. This assessment identifies community outreach needs, provides for public access opportunities beyond statutory requirements, and supports the provision of adequate public access to information about the annual report on SO₂ emissions at the San Juan Generating Station.

EPA requires that the annual report of SO₂ emissions at the San Juan Generating Station be “available for public inspection.” The Bureau will follow this Plan, specifically designed to ensure nondiscriminatory access to this public participation opportunity related to federal rule requirements.

Details about planned Bureau outreach are provided in this Plan.

Project Overview

Pursuant to the Data Requirements Rule for the 2010 1-Hour Sulfur Dioxide (SO₂) Primary National Ambient Air Quality Standard (NAAQS), air agencies are required to submit an annual report to their respective EPA Regional Administrator for areas which demonstrated attainment for the 2010 SO₂ NAAQS by modeling of actual emissions. This report shall document the annual SO₂ emissions of each applicable source and provide an assessment of the cause of any emissions increase from the previous year. The first report is due by July 1 of the calendar year after the effective date of the area’s initial designation.

All areas of New Mexico have been designated attainment/unclassifiable through three rounds of designations by the U.S. Environmental Protection Agency (EPA). As part of the round 3 designation process, the 2015 Data Requirements Rule stipulated that, for areas surrounding sources emitting 2,000 tons per year (TPY) or more of sulfur dioxide, states must characterize air quality in one of three ways: (1) ambient air monitoring; (2) modeling of either actual or allowable emissions; or (3) demonstration of enforceable emissions limitations below the 2,000 TPY threshold.

In New Mexico, the only source emitting above the 2,000 TPY threshold was the San Juan Generating Station (SJGS). This source, working with the Air Quality Bureau, decided to characterize that area’s air quality by modeling actual emissions. Modeling submitted to EPA in January 2017 demonstrated that this area met the 2010 SO₂ Primary NAAQS, using quality-assured data from the SJGS’ continuous emissions monitoring system (CEMS) for the years 2013 - 2015. EPA designated this area and all of San Juan County as attainment/unclassifiable in December 2017.

This Project is moderately important to the Department and the affected communities. The annual report is a federal requirement for continuing to show that San Juan County meets the 2010 Primary SO₂ NAAQS. However, the annual report does not affect any permitting or regulatory action that would negatively affect stakeholders.

A more detailed description of this project is available for download at www.env.nm.gov/air-quality/proposed-regs/, or in hard copy at the Bureau's main office, 525 Camino de los Marquez, Santa Fe, New Mexico 87505.

Contacts

The public is encouraged to contact Bureau or NMED staff at any time with questions or comments regarding this Plan or the annual report, or for help in accessing public participation opportunities.

Project and Public Involvement Plan contact:

Anne Keller, Environmental Analyst
Air Quality Bureau
525 Camino de los Marquez
Santa Fe, NM 87505

Phone: (505) 476-4333

Email: anne.keller@state.nm.us

Website:

Outreach materials and notices will include links to the following website: <https://www.env.nm.gov/air-quality/proposed-regs/>

Non-English Language Speaker Assistance and Accommodations:

The Bureau will include information about how persons may request non-English speaker language assistance and accommodations for persons with disabilities. If any person requires non-English Language Speaker Assistance, assistance for an interpreter or auxiliary aid (e.g., accommodations for persons who are disabled) to participate in review of this report, please contact the Project contact listed above, preferably 14 days prior to the end of the public comment period. TDD or TTY users please access the number via the New Mexico Relay Network, 1-800-659-1779 (voice); TTY users: 1-800-659-8331).

Community Descriptions/LEP Analysis

To address potential or existing environmental justice areas, Bureau staff completed an initial screening of the potentially affected communities using the 2018 American Community Survey 5-year Estimates Detailed Tables Report, the July 1, 2019 U.S. Census QuickFacts Report, and the EJSCREEN ACS Summary Report. These tools help identify communities with demographic factors that may benefit from a variety of approaches for notification and outreach communication.

Table 1 summarizes the demographics of potentially affected communities analyzed using the 2018 American Community Survey 5-year Estimates Detailed Tables Report, the July 1, 2019 U.S. Census

QuickFacts Report, and the EJSCREEN ACS Summary Report, including the proportion of limited English proficiency persons.

Table 1: Potentially affected communities and their estimated demographics.

Potentially Affected Communities	Total Number of Households	Per Capita Income	Minority Population (%)	Non-English Language Spoken at Home* (%)	Limited-English Proficient Individuals† (%)	Linguistically Isolated Households (%)
San Juan County	43,134	\$23,206	62%	31%	5.7%	4%
San Juan Generating Station – 4 mi	458	\$21,540	57%	33%	2%	1%
New Mexico	775,651	\$26,085	63%	35%	8.9%	5.3%
USA	119,730,128	\$32,621	40%	22%	8.5%	4.4%

*Significant languages in these households include Navajo and Spanish.

†Limited English Proficient Individuals are those that speak a language other than English at home **and** who speak English “less than very well.”

Using the results of the 2018 American Community Survey 5-year Estimates Detailed Tables Report, the July 1, 2019 U.S. Census QuickFacts Report, and the EJSCREEN ACS Summary Report, San Juan County and the area immediately surrounding San Juan Generating Station include areas that may benefit from additional public participation support. Two areas were analyzed: (1) a 4-mile buffer surrounding the San Juan Generating Station; and (2) all of San Juan County. San Juan County was included in the analysis because the EPA designation depends on continued reporting for the county.

The results of the EJSCREEN analysis are as follows:

1. The population in the affected communities have a lower per capita income, compared to state and national demographic data;
2. Compared to national demographic data, the 4-mile buffer community has a higher minority population. However, San Juan County has a slightly lower minority population than the state average;
3. Compared to national demographic data, the 4-mile buffer community has a higher population not speaking English at home. However, San Juan County has a slightly lower proportion of non-English-speaking households than the state average;
4. The 4-mile buffer community comprises 2% of individuals who speak English “less than very well” and who do not speak English at home – the “Limited English Proficient individuals.” This is lower than the state average of 8.9%;
5. San Juan County has 5.7% of individuals considered to be “Limited English Proficient individuals,” which is also less than the state average; and
6. Only 1% of households in the 4-mile buffer are considered “linguistically isolated,” while 4% in San Juan County are considered so. Both are lower than the state average of 5.3%.

No meetings are anticipated, as this project should garner little attention. Should a meeting be requested, NMED will respond with an update to this Public Involvement Plan. An updated plan would

include further outreach efforts to announce the meeting, and a contingency plan should we be unable to hold a meeting due to unforeseen circumstances. However, a hearing will not be required. To help incorporate the language and communication needs of this community when conducting public outreach, the Bureau will provide public service announcements to nearby Chapter Governments of the Navajo Nation and to a Navajo radio station. This will consist of public comment notices to make public participation efforts as inclusive as possible within Bureau budget and time limitations. Notices will include information on how to request additional materials in another language or how to request other communication assistance through NMED. These outreach efforts are outlined more in depth below. In addition, persons with disabilities may request additional services and arrangements necessary for participation in all public involvement activities by using the information provided in the “Contacts” and “Document Repositories” sections of this Plan.

Details of Outreach Activities

The public may ask questions about this project at any time, regardless of the public comment period. However, to be included in the administrative record, comments solicited by public notices must be submitted during the noticed comment periods in accordance with the requirements of the public notice. Additionally, the public may request to review official project documents at the Bureau or through one of the document repositories listed below.

As discussed above, materials will be distributed to Navajo-speaking entities. The Bureau has concluded, through a separate analysis, that materials will not be translated into a language other than English.

The NMED field offices will serve as access areas for the Bureau to leave hard copies of important documents and information about how to comment on the proceeding as well as instructions to access this information electronically. Specific repository addresses are provided on page 6.

The following tables offer information of how the public will be invited to participate in this project. The timeline will follow similar dates in subsequent years.

Table 2: Timeline of public involvement opportunities. Regulatory or statutory deadlines are in **bold**. Note that dates may be approximate. Notices will contain final dates, and specific locations and times.

Activity	Dates
PIP development.	April 2020
Notice of draft annual report via ListServ and NMED web site.	May 15, 2020
Public review and informal comment period.	May 15, 2020 – June 15, 2020
Submit Annual Report and comment summary to U.S. EPA Region 6.	July 1, 2020

Additional Community Outreach:

Bureau Staff will make every effort to follow this Plan. However, this timeline is tentative and subject to change. Should significant changes to this timeline occur, the Plan will be amended and republished in the same manner as the original plan.

Because San Juan County includes tribal lands over which the Bureau does not have jurisdiction, a copy of the Annual Report, the announcement of its availability and the process for comment (in English) will be emailed to the following Chapter Governments of the Navajo Nation:

- Tse Daa K’aan [Hogback] (tsedaakaan@navajochapters.org)

- Upper Fruitland (upperfruitland@navajochapters.org)
- Nenahnezad (nenahnezad@navajochapters.org)
- San Juan (sanjuan@navajochapters.org)
- Huerfano (huerfano@navajochapters.org)

A Listserv announcement of document availability and comment period will be sent to subscribers of the AQB Regulatory and SIP Announcements, and to the subscribers of the AQB Four Corners Air Quality Group. To receive email updates through NMED's Listserv, sign up electronically at <https://public.govdelivery.com/accounts/NMED/subscriber/new>, then choose which topics you are most interested in. This project will periodically send updates to the topic lists described above.

Document Repositories:

The following is a list of locations where copies of relevant documents will be available to the community:

Santa Fe	Farmington
525 Camino de los Marquez, Ste. 1 Santa Fe, NM 87505 Telephone: 505.476.4300	3400 Messina Drive, Ste. 5000 Farmington, NM 87402 Telephone: 505.566.9741

Electronic copies are available at:

<https://www.env.nm.gov/air-quality/proposed-regs/>

About datasets used in this table

Value Notes

1. Includes data not distributed by county.

▲ Estimates are not comparable to other geographic levels due to methodology differences that may exist between different data sources.

Some estimates presented here come from sample data, and thus have sampling errors that may render some apparent differences between geographies statistically indistinguishable. Click the Quick Info ⓘ icon to the left of each row in TABLE view to learn about sampling error.

The vintage year (e.g., V2019) refers to the final year of the series (2010 thru 2019). *Different vintage years of estimates are not comparable.*

Fact Notes

- (a) Includes persons reporting only one race
- (b) Hispanics may be of any race, so also are included in applicable race categories
- (c) Economic Census - Puerto Rico data are not comparable to U.S. Economic Census data

Value Flags

- Either no or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest or upper interval of an open ended distribution.
- D Suppressed to avoid disclosure of confidential information
- F Fewer than 25 firms
- FN Footnote on this item in place of data
- N Data for this geographic area cannot be displayed because the number of sample cases is too small.
- NA Not available
- S Suppressed; does not meet publication standards
- X Not applicable
- Z Value greater than zero but less than half unit of measure shown

QuickFacts data are derived from: Population Estimates, American Community Survey, Census of Population and Housing, Current Population Survey, Small Area Health Insurance Estimates, Small Area Income and Poverty Estimates, State and County Housing Unit Estimates, County Business Patterns, Nonemployer Statistics, Economic Census, Survey of Business Owners, Building Permits.

ACS DEMOGRAPHIC AND HOUSING ESTIMATES

Survey/Program:

American Community Survey

Year:

2018

Estimates:

1-Year

Table ID:

DP05

Source: U.S. Census Bureau, 2018 American Community Survey 1-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

For more information on understanding race and Hispanic origin data, please see the Census 2010 Brief entitled, Overview of Race and Hispanic Origin: 2010 , issued March 2011. (pdf format)

While the 2018 American Community Survey (ACS) data generally reflect the July 2015 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas, in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

An "***" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution, or the margin of error associated with a median was larger than the median itself.

An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution.

An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution.

An "***" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An "*****" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

An "N" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

An "(X)" means that the estimate is not applicable or not available.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

DP05

Source: U.S. Census Bureau, 2018 American Community Survey 1-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

For more information on understanding race and Hispanic origin data, please see the Census 2010 Brief entitled, Overview of Race and Hispanic Origin: 2010 , issued March 2011. (pdf format)

While the 2018 American Community Survey (ACS) data generally reflect the July 2015 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas, in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

An "***" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one

or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution, or the margin of error associated with a median was larger than the median itself.

An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution.

An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution.

An "***" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An "*****" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

An "N" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

An "(X)" means that the estimate is not applicable or not available.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

AGE BY LANGUAGE SPOKEN AT HOME FOR THE POPULATION 5 YEARS AND OVER IN LIMITED ENGLISH SPEAKING HOUSEHOLDS

Survey/Program:

American Community Survey

Universe:

Population 5 years and over in households in which no one 14 and over speaks English only or speaks a language other than English at home and speaks English very well

Year:

2018

Estimates:

5-Year

Table ID:

B16003

Source: U.S. Census Bureau, 2018 American Community Survey 1-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

A "limited English speaking household" is one in which no member 14 years old and over (1) speaks only English or (2) speaks a non-English language and speaks English "very well." In other words, all members 14 years old and over have at least some difficulty with English. By definition, English-only households cannot belong to this group. Previous Census Bureau data products have referred to these households as "linguistically isolated" and "Households in which no one 14 and over speaks English only or speaks a language other than English at home and speaks English 'very well'." This table is directly comparable to tables from earlier years that used these labels.

While the 2018 American Community Survey (ACS) data generally reflect the July 2015 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas, in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

An "***" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution, or the margin of error associated with a median was larger than the median itself.

An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution.

An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution.

An "***" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An "*****" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

An "N" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

An "(X)" means that the estimate is not applicable or not available.

SELECTED CHARACTERISTICS OF THE NATIVE AND FOREIGN-BORN POPULATIONS

Survey/Program:

American Community Survey

Year:

2018

Estimates:

5-Year

Table ID:

S0501

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Explanation of Symbols:

An "***" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution.

An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution.

An "***" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An "*****" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

An "N" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

An "(X)" means that the estimate is not applicable or not available.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

While the 2011 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Occupation codes are 4-digit codes and are based on Standard Occupational Classification 2010.

Industry codes are 4-digit codes and are based on the North American Industry Classification System 2007. The Industry categories adhere to the guidelines issued in Clarification Memorandum No. 2, "NAICS Alternate Aggregation Structure for Use By U.S. Statistical Agencies," issued by the Office of Management and Budget.

These data for the occupied housing units lines refer to the native or foreign-born status of the householder.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

EJSCREEN Report (Version 2019)

County: San Juan, NEW MEXICO, EPA Region 6

Approximate Population: 128,221

Input Area (sq. miles): 5538.40

Selected Variables	State Percentile	EPA Region Percentile	USA Percentile
EJ Indexes			
EJ Index for PM2.5	48	56	70
EJ Index for Ozone	48	64	75
EJ Index for NATA* Diesel PM	46	51	64
EJ Index for NATA* Air Toxics Cancer Risk	46	54	68
EJ Index for NATA* Respiratory Hazard Index	50	56	69
EJ Index for Traffic Proximity and Volume	55	61	69
EJ Index for Lead Paint Indicator	56	69	73
EJ Index for Superfund Proximity	59	70	76
EJ Index for RMP Proximity	64	55	68
EJ Index for Hazardous Waste Proximity	65	58	67
EJ Index for Wastewater Discharge Indicator	77	77	85

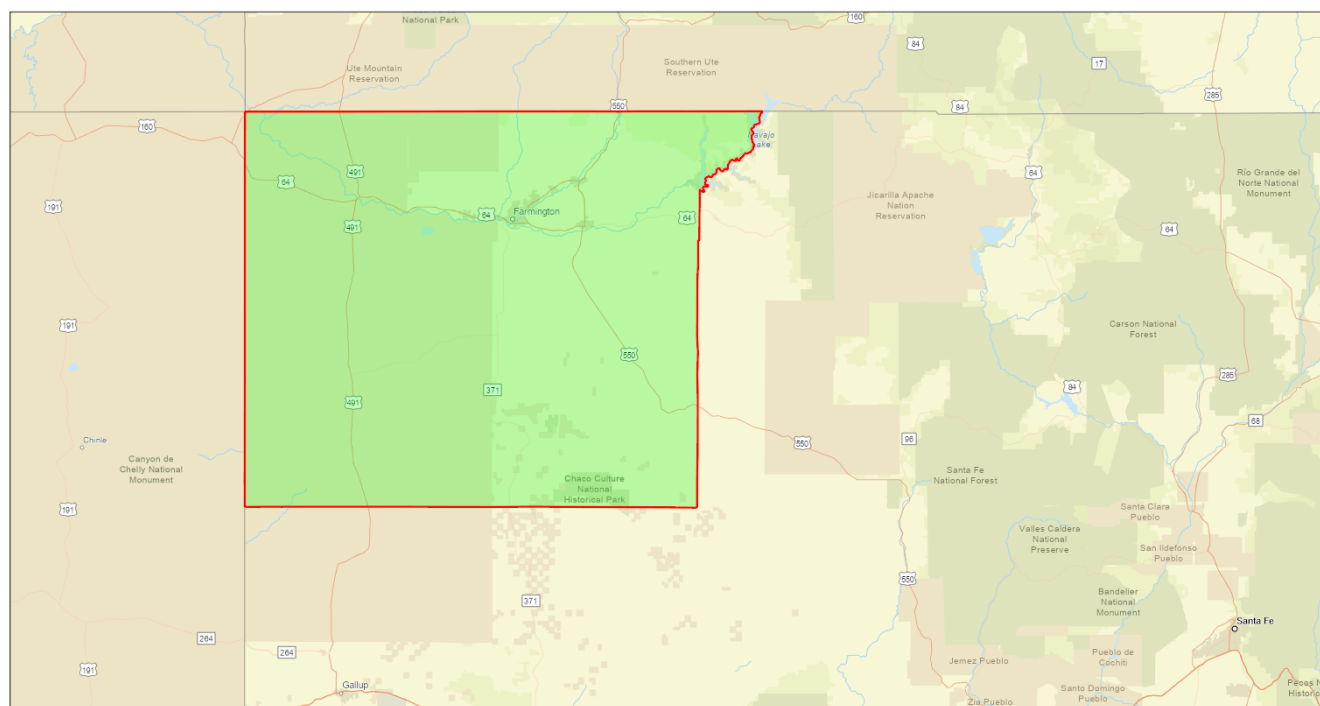

This report shows the values for environmental and demographic indicators and EJSCREEN indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports.

* The National-Scale Air Toxics Assessment (NATA) is EPA's ongoing, comprehensive evaluation of air toxics in the United States. EPA developed the NATA to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that NATA provides broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. More information on the NATA analysis can be found at: <https://www.epa.gov/national-air-toxics-assessment>.

For additional information, see: www.epa.gov/environmentaljustice

EJSCREEN is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJSCREEN outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.
